

# School Based on Biophilic Design

MASS Education

# The Problem

Students, in classic schools, sit in boring classrooms incased in concrete and steel. The learning environment is proven to affect the acquisition of knowledge with children, and even adults. As teenagers we suffer from these issues too, that is why we sought out to build a better school, a more natural one.

# What We Built

We designed and build a state of the art biophilic school. A school where the student is fully immersed in the true beauty of nature. Birthing inspiration and learning from the roots of this world.

# Pros of Biophilic Design

- **Light:** Allows orientation of time of day and season, and is attributed to wayfinding and comfort
- **Air:** Ventilation, temperature, and humidity are felt through air.
- **Plants:** Bringing vegetation to the exterior and interior spaces of the building provides a direct relationship to nature.

# Let's Review

- Boring classrooms lead to less focus and education
- Learning in nature helps children with creativity and inspiration
- The solution: our Biophilic School
